

Your Hard Drive *Will* Fail, LTO Tape *Won't*.

Shelves Full of Time Bombs

Chances are, you've lost a hard drive, or you're about to. Drives keep failing; data corruption, head crashes, controller failures, motor failures, and even magnetic field loss.

Can you afford to lose your data?

Tape. Tried. Tested. Trusted.

Hard drives were never designed to sit on a shelf, tape was.

LTO tape is simply the best way to archive your data.

Tape is a mature technology relied upon the world over with a *shelf life of 30 Years!*

You can rest easy knowing your data is protected.

Affordability

At half the cost of hard drives, the affordability of LTO tape can't be beat.

Let's archive *your* data.
